Kristine & Chip,

Here's DEQ's draft Source Control Decision (SCD) for the GE Portland Inspection & Repair Service Center at 2727 NW 29<sup>th</sup> Ave, Portland. In our SCD, we conclude: **1)** that the source control evaluations (SCEs) have adequately characterized the site, **2)** that stormwater is the only relevant contaminant pathway of concern to the river, **3)** with the source controls measures implemented at the site..., & the fact that stormwater from the site will be re-directed to the City treatment plant by 12/11..., that stormwater doesn't pose a significant threat to the river, & **4)** that no further source control actions are needed.

Please review the attached SCD & provide comments to either Tom Gainer (DEQ's GE project manager) or me by 5/31/11. Feel free to call or e-mail either Tom or me. Tom can be reached (503) 229-5326.

**Subject:** RE: Draft Source Control Decision for General Electric Site

Hello, everyone!

This is a head's up that DEQ will submit a draft source control decision (SCD) to EPA for their review & comment next week for the GE Inspection & Repair Service Center. The GE site is located approximately 3,000 feet from the southwest shore of the Willamette River in the vicinity of river mile 9.5 within the Portland Harbor study area. The main contaminant transport pathway of concern at the site has been stormwater. Our SCD will be that the site has been adequately characterized, & with the several interim remedial action performed onsite, does not pose a current or reasonably likely future source control threat to the river.

As always, I'll send a 2<sup>nd</sup> e-mail to you all when we submit the draft SCD to EPA & offer you an opportunity to review & comment.

Jim Anderson
